## Range of PVC Coated Steps

PVC coated footsteps or rungs for Waltzer India are specialised components designed for use in amusement park rides, specifically the Waltzer ride. These footsteps or rungs are typically made of metal and covered with a durable PVC (Polyvinyl Chloride) coating. The PVC coating serves several important purposes:

- **Safety:** The PVC coating provides a non-slip surface, ensuring that riders can maintain their grip and balance as the Waltzer ride spins and tilts. This helps prevent accidents and ensures a safer experience.
- **Comfort:** PVC-coated footsteps or rungs are more comfortable for riders to stand or sit on compared to bare metal, as they are less likely to cause discomfort or abrasions.
- **Durability:** The PVC coating enhances the durability and longevity of the footsteps or rungs, protecting them from wear and tear due to constant use and exposure to the elements.
- **Aesthetic Appeal:** The PVC coating can come in various colours and designs, adding an element of visual appeal to the Waltzer ride and making it more attractive to visitors.
